

BRIDGES BORNEO-SPORENBURG

1998-2001, Amsterdam, The Netherlands

The three bridges of Borneo/Sporenburg by West 8 play an essential role at the creation of the unique atmosphere in the harbour-residential area. Two of the bridges, one on the West side and the other on the East side, span the 93-meter wide water of the Railroad basin and connect the islands of Borneo and Sporenburg. The third bridge is situated in the line of the East bridge and spans the 25-meter wide inland port.
